

Payment

Is PayPal secure?

Yes. PayPal uses SSL technology to keep your information safe. In addition, when you send a payment using PayPal, the recipient won't receive sensitive financial information like your credit card or bank account number. In this way, you don't have to worry about paying people whom you don't know. PayPal is designed from the ground up to be a safer way to send money online. Your financial information won't be sold or exposed to any merchant or retailer.
